BOOK MANUSCRIPT

Title: *Madison's Mistake: Restoring the Separation of Powers*

Abstract: This book develops a theory of the separation of powers as distinct from—and indeed antithetical to—the traditional idea of checks and balances. I argue that the principle of separation of powers requires legislative supremacy, such that the legislature must have adequate control over the subordinate branches in order to prevent separation of powers from devolving into checks and balances. I also argue that the separation of powers enables a synthesis of competitive democracy and deliberative democracy, because the site of competitive democracy is the legislature while the appropriate site of deliberation is the administrative process. I theorize deliberative procedure as a distinctive mechanism of accountability, and I argue that constitutional due process contributes to this form of accountability—indeed, that due process

contributes to accountability more effectively than current innovations in constitutional law that have focused on strengthening presidential control of administration. In the course of developing these arguments, I engage with the legacy of Madison (to some extent as mediated by Robert Dahl) in democratic theory. The analysis has implications for important current debates in democratic theory and institutional design, concerning the separation of powers, presidential power, and the scope of judicial review.
